AIDS COMMENT

John Burns JUNE 10, 2012 05:33 PM

The article about Stem Cells is interesting, but many African Americans and others who believe they have AIDS/HIV, may not have AIDS at all.

If you carefully read what the producers of these AIDS tests say in writing, they suggest the AIDS/HIV test is not conclusive, or proof you have AIDS/HIV. You can also find on the Internet additional information suggesting; “Since the accuracy for HIV antibody tests has never been properly established, it is not possible to claim that a positive test indicates a current, active HIV infection or even to know what it may indicate.24” If we go beyond the fact AIDS/HIV is a man-made genetically engineered disease, proved by Virologist as early as 1988 and exposed by Dr. Robert B. Strecker in his Video The Strecker Memorandum, in addition to the research of Brother Zears Miles, we really need to look at what the disease is and how it replicates.

For a Stem Cell to cure AIDS/HIV, it would have to inhibit the Protein Enzyme, Reverse Transcriptase. The AIDS/HIV Virus must have this protein enzyme to replicate, or reproduce itself. So if the Stem Cell therapy is not inhibiting this enzyme, people may line up for another unproven cure, the same as they line up to be tested for a disease which they my receive a “False Positive” test results. Africans and other dark skinned people naturally have fewer “T-Cells” than white people and many of the African, or black population when tested have been proven to be “False Positive” because of their naturally low T-Cell Count.

Many of the drugs used to supposedly cure AIDS/HIV are synthetic drugs, which try to block the reverse transcriptase, but actually do the same damage AIDS does, by destroying the Immune System. As victims continue to take these drugs, their Immune Systems are further depressed and the worry only adds to an ineffective Immune System, which is unable to fight off any illness. The human body is organic and as early as 1900, it was proven that all drugs, including aspirin are harmful to your good health. The interesting point of cure, as far as AIDS is concerned, is that the doctors and scientists who have given cures or evidence of what has cured AIDS, Cancer and other diseases have been attacked by the American Medical Association and the U.S. Government. The Medical Industry has suppressed the Truth of Natural Cures.

Many diseases have been completely remedied by proper diet, while others means have been Herbs. It wasn't until mid 1990's that scientists rediscovered the power of natures remedy for the majority of viruses, bacteria, and fungus and among the strongest natural antibiotic the Olive Leaf Extract, used for thousands of years and known as the Tree Of Life by the Ancients. Interestingly enough, scientists found that the Olive Leaf Extract inhibits the Enzyme Reverse Transcriptase, kills almost all Bacteria, Virus and Fungus. So we are led astray constantly with lies and additional lies of drugs, testing and now Stem Cells, the really big question is, "Where Is The Proof".

Change your diet and change your life, eat more raw live foods and drink more fresh squeezed juices. That type of diet is the cure of most disease and has been proven since 1912 in the U.S.

Good Luck To you All
